

RA Ecosystem Partner Solution

Network Interface Card(NIC) based on Renesas RA2E1 MCU

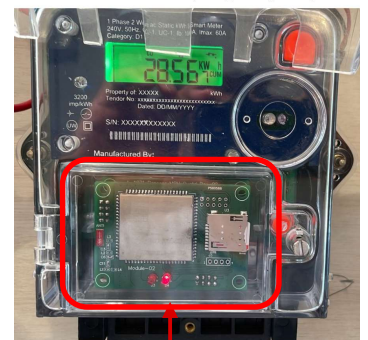

Solution Summary

JNE's Network Interface Card (NIC) module is a ready-to-use solution for smart metering using the onboard RA2E1/32Pin ARM MCU chip ([RA2E1 - 48MHz Arm® Cortex®-M23 Entry Level General-Purpose Microcontroller | Renesas](#)). NIC(Network Interface card) is extended communication card in Smart meter. NIC can easily integrate with electricity meters (1-Phase & 3-Phase) and leverages any available network to form a highly resilient network for the utility. NIC supports 2-way wireless (GPRS, NBIOT etc.) functionality, remote data acquisition, meter program management, and real-time alerts for meter tampering and outages info to Utilities. 2-way communications network gives utilities greater efficiency, more reliable data delivery, improved customer satisfaction, and a scalable platform to support advanced smart grid and smart city applications.

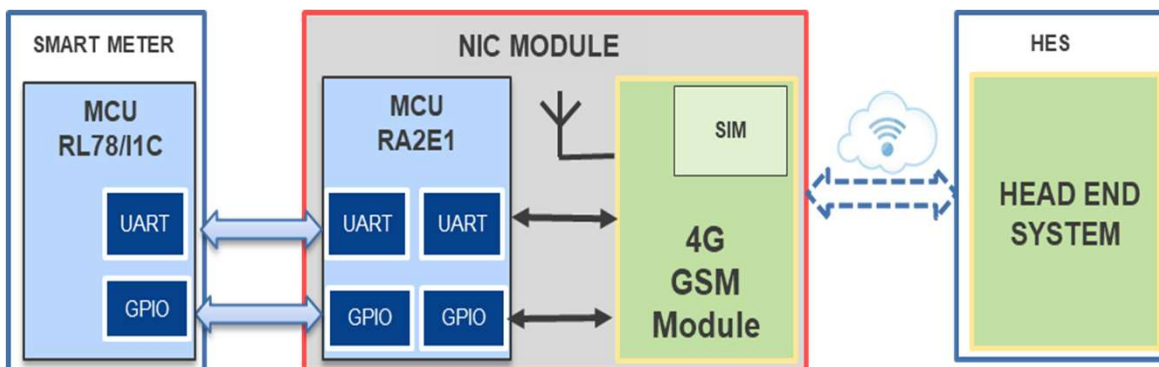

Features/Benefits

- Onboard MCU can handles multiple communication technology
- Support multiple 4G/GPRS Comm Modules
- Support IPv6 network addressing.
- Support push the data at configured intervals to the HES
- Secure communication to HES
- Programmable Data acquisition (Push/Pull) frequency
- Support Firmware (FOTA) upgradation
- Power consumption as per IS-16444

NIC card

Target Markets & Applications

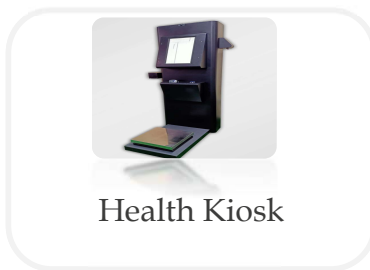

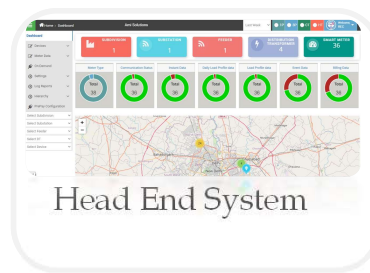

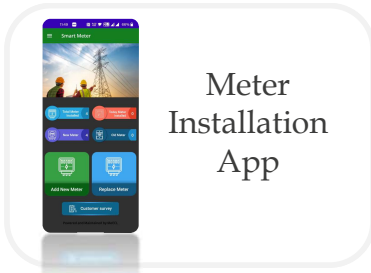

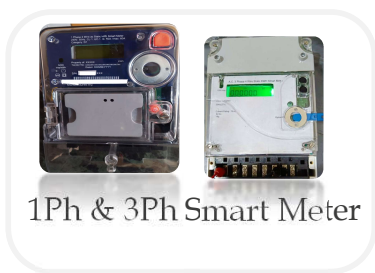

- Smart Meter
- Net Metering
- Energy Monitoring
- Water Meter
- Gas Meter
- IoT Application

JNE Profile

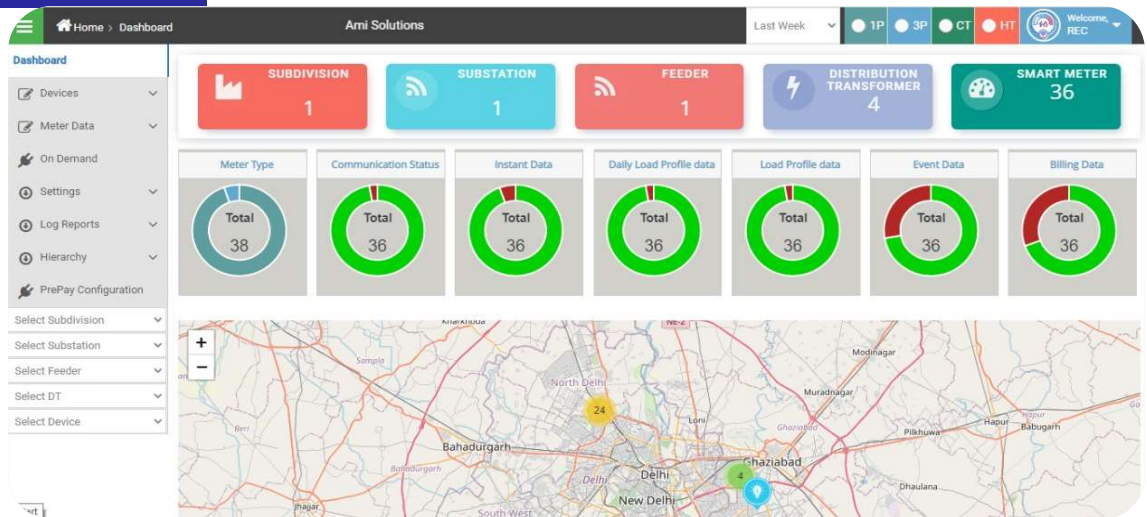

JN Enterprise(Now New registration JNE Smart technologies Pvt. Ltd.) is an engineering services & technology solutions provider with core expertise in the *Smart product development like Smart Meter, Embedded Systems, Health product ,EV charger, Smart plug and Cloud Software Services ,Android Apps and help to setup manufacture plant.*

A Smart Partner for Smart Product & Metering Market Enablers
